Finite element analysis shows whether a product will break, wear out, or work the way it was designed. It is called analysis, but in the product development process, it is used to predict what is going to happen when the product is used. Finite Element Analysis Software | Autodesk The main objective of finite element analysis is to predict the performance of physical products in real world applications. And the secondary objective is to reduce cost of post production like finishing, alterations and tolerances. Most of the things are checked before producing in real world simulation the product to avoid unnecessary costs. 1.
