Gender History in PracticeHistorical Perspectives on Bodies, Class & CitizenshipCornell University Press

monographic series Royal Society of Chemistry

The eight essays collected in this volume examine the practice of gender history and its impact on our understanding of European history. Each essay takes up a major methodological or theoretical issue in feminist history and illustrates the necessity of critiquing and redefining the concepts of body, citizenship, class, and experience through historical case studies. Kathleen Canning opens the book with a new overview of the state of the art in European gender history. She considers how gender history has revised the master narratives in some fields within modern European history (such as the French Revolution) but has had a lesser impact in others (Weimar and Nazi Germany). Gender History in Practice includes two essays now regarded as classics?"Feminist History after the 'Linguistic Turn'" and "The Body as Method"--as well as new chapters on experience, citizenship, and subjectivity. Other essays in the book draw on Canning's work at the intersection of labor history, the history of the welfare state, and the history of the body, showing how the gendered "social body" was shaped in Imperial Germany. The book concludes with a pair of essays on the concepts of class and citizenship in German history, offering critical perspectives on feminist understandings of citizenship. Featuring an extensive thematic bibliography of influential works in gender history and theory that will prove invaluable to students and scholars, Gender History in Practice offers new insights into the history of Germany and Central Europe as well as a timely assessment of gender history's accomplishments and challenges.

Communication is vital for social participation. However, communication often takes place under suboptimal conditions. This makes communication harder and less reliable, leading at worst to social isolation. In order to promote participation, it is necessary to understand the mechanisms underlying communication in different situations. Human communication is often speech based, either oral or written, but may also involve gesture, either accompanying speech or in the form of sign language. For communication to be achieved, a signal generated by one person has to be perceived by another person, attended to, comprehended and responded to. This process may be hindered by adverse conditions including factors that may be internal to the sender (e.g. incomplete or idiosyncratic language production), occur during transmission (e.g. background noise or signal processing) or be internal to the receiver (e.g. poor grasp of the language or sensory impairment). The extent to which these factors interact to generate adverse conditions may differ across the lifespan. Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition. Further, frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension. To date, less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions. It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind, updating them as appropriate and inhibiting irrelevant information, until an adequate match can be achieved with lexical and semantic representations held in long term memory. Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory. It is likely that the episodic buffer plays a key role in communication under adverse conditions. The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches. This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and/or the role of cognition in communication. As such, this topic belongs firmly within the field of Cognitive Hearing Science. Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan. Such

exchange is the forerunner of broader dissemination of results which ultimately, may make it possible to take measures to reduce adverse conditions, thus facilitating communication. Such measures might be implemented in relation to the built environment, the design of hearing aids and public awareness. Does God exist? Who and what is God? Is there scientific proof of the existence of God? What is the nature of the soul? Is there life after death? Do angels exist? The SEED MASTER, is the second volume of THE TRINITY OF LIGHTS; and is a compilation of four books in one. These books are "THE SEED MASTER", "POEMS OF INSPIRATION & POEMS OF WISDOM", THE BOOK OF PSALMS", THE BOOK OF GAMES BY KEN NUNOO". This book includes personalities and genders of the Hebrew alphabets.The bible code; Beresit = 77 = Leminehu = 77 = Eloahum = 77 = Emmanuel = 77 = Christ = 77. The formula above means: Christ is Emmanuel, Emmanuel is God, God is the Seed, the Seed is the Beginning. The code translates these words into numerical values as: Beresit = 7,3,19,3,20,8,17 = 77. Leminehu = 9,3,14,8,10,3,12,18 = 77. Eloahum = 3,9,15,6,12,18,14 = 77. Emmanuel = 3,14,14,6,10,18,3,9 = 77. Christ = 1,12,19,9,20,17=77. Beresit = Beginning; Leminehu = Seed, Eloahum = God.

Completely revised and expanded, this fourth edition covers the 986 minerals found in Arizona, showcased with breathtaking new color photographs throughout the book. The new edition includes more than 200 new species not reported in the third edition and previously unknown in Arizona. Chapters in this fourth edition of Mineralogy of Arizona cover gemstones and lapidary materials, fluorescent minerals, and an impressive catalog of mineral species. The authors also discuss mineral districts, including information about the geology, mineralogy, and age of mineral occurrences throughout the state. The book includes detailed maps of each county, showing the boundaries and characteristics of the mineral districts present in the state. Arizona's rich mineral history is well illustrated by the more than 300 color photographs of minerals, gemstones, and fluorescent minerals that help the reader identify and understand the rich and diverse mineralogy of Arizona. Anyone interested in the mineralogy and geology of the state will find this the most up-to-date compilation of the minerals known to occur in Arizona.

Literary Market Place 2001 is the ultimate insider's guide to the U.S. book publishing industry, covering every conceivable aspect of the business. In two, easy-to-use volumes, it provides: -- 50 sections organizing everyone and everything in the business -- from publishers, agents, and ad agencies to associations, distributors, and events -- Over 14,500 listings in all -- featuring names, addresses, and numbers ... key personnel ... activities, specialties, and other relevant data ... e-mail addresses and Web sites ... and more -- Some 24,000 decision-makers throughout the industry, listed in a separate "Personnel Yellow Pages" section in each volume -- Thousands of services and suppliers equipped to meet every publishing need or requirement -- More than 400 new entries to this edition plus thousands of updated listings throughout. LMP 2001 leaves no stone unturned in connecting you with the publishing firm, service, or product you or your patrons need. It's completely revised and updated to help: -- Publishers locate other publishers, free-lancers, agents, printers, wholesalers, manufacturers, and more -- Suppliers find names and numbers of potential publishing customers -- Job seekers locate contact names, addresses, and phone numbers throughout the industry -- Booksellers get publisher ordering and shipping information -- Writers locate publishers for their works -- Librarians provide patrons with the reference source they need to find their way through the publishing industry

The three-volume set LNCS 6891, 6892 and 6893 constitutes the refereed proceedings of the 14th International Conference on Medical Image Computing and Computer-Assisted Intervention, MICCAI 2011, held in Toronto, Canada, in September 2011. Based on rigorous peer reviews, the program committee carefully selected 251 revised papers from 819 submissions for presentation in three volumes. The first volume includes 86

papers organized in topical sections on robotics, localization and tracking and visualization, planning and image guidance, physical modeling and simulation, motion modeling and compensation, and segmentation and tracking in biological images.

It is predicted that climate change will result in big changes to the global distribution of rainfall, causing drought and desertification in some regions and floods in others. Already there are signs of such changes occurring, with particularly serious consequences for poorer countries. The need for international cooperation in managing the effects of climate change, and other influences on the hydrological cycle, is becoming urgent. Future wars may well be fought over water. This book is part of a series focusing on key issues in environmental science and technology. Focusing on the sustainability of water supplies to the growing populations throughout the world, this volume consists of articles contributed by a group of experts drawn from around the globe. Issues covered include: policy making in the European Union; rural water supplies in Africa; chemical monitoring and analytical methods; water use in agriculture; social justice in supplying water; potable water recycling, and sustainable water treatment. The book will be useful to those working in the water industry, policy makers and planners, researchers and environmental consultants, and students in environmental science, technology, engineering, and management. There is also much here to interest all concerned with major environmental issues such as climate change and the many other factors which influence the sustainability of water supplies.

Insights from Xenoliths, Orogenic Deep Sections, and Geophysical Studies University Science Books

In 1968, twenty-one-year-old Fred McCarthy transitioned from the monastic life of a seminary student to that of a U.S. Army helicopter gunship commander in Vietnam. Despite preparation from a family tradition of decorated combat service, a strong sense of patriotism, a love for aviation, and a desire for adventure, he got far more than he bargained for. Written after 50 years of reflection, reading, and study, this memoir tells both a universal story about war, adventure, and perseverance and, also shares the intensely personal experience of the Vietnam War and its legacy for those who fought in it. McCarthy describes many of his missions, reflects on the nature of being a combat helicopter pilot, and processes the experience through his poetry, letters home, and reflective analysis.

A review of the current observational knowledge and understanding of the cosmic X-ray background.

CIS U.S. Serial Set Index: 55th-57th Congresses, 1897-1903. 3 v R. R. Bowker

This illustrated book, which includes over 100 works by Matisse together with numerous colourful fabrics, is the catalogue of a groundbreaking exhibition at the Musee Matisse, Le Cateau-Cambresis; the Royal Academy of Arts, London; and the Metropolitan Museum of Art, New York. Matisse's relationship with the textiles that surrounded him from his earliest days is revealed here for the first time. Charting how the fabrics he painted became the very fabric of his paintings, the authors examine the ways in which Matisse used what he called his 'working library' of textiles to furnish, order and compose some of the twentieth century's most pioneering works of art.

Cartography and cinema are what might be called locational machinery. Maps and movies tell their viewers where they are situated, what they are doing, and, to a strong degree, who they are. In this groundbreaking work, eminent scholar Tom Conley establishes the ideological power of maps in classic, contemporary, and avant-garde cinema to shape the imaginary and mediated relations we hold with the world. Cartographic Cinema examines the affinities of maps and movies through

comparative theory and close analysis of films from the silent era to the French New Wave to Hollywood blockbusters. In doing so, Conley reveals that most of the movies we see contain maps of various kinds and almost invariably constitute a projective apparatus similar to cartography. In addition, he demonstrates that spatial signs in film foster a critical relation with the prevailing narrative and mimetic registers of cinema. Conley convincingly argues that the very act of watching films, and cinema itself, is actually a form of cartography. Unlike its function in an atlas, a map in a movie often causes the spectator to entertain broader questions—not only about cinema but also of the nature of space and being.

Climatological Data

This 10-chapter volume encompasses contributions from a wide spectrum of Earth science disciplines, including geophysics, geodynamics, geochemistry, and petrology, to provide an overview of the nature and evolution of the crust-mantle and lithosphere-asthenosphere boundaries in different tectonic

settings, combining studies that exploit different types of data and interpretative approaches. The integration of geochemical, geophysical, and geodynamic data sets and their interpretation provides a state-of-the-art summary of current understanding, and will serve as a blueprint for future research activities.

Gender History in Practice

This proceedings contains nearly 200 papers on cutting-edge research presented at the seventh international Symposium on Coastal Engineering and Science of Coastal Sediment Processes, held May 26, 2011, in Miami, Florida, USA. This technical specialty conference was devoted to promoting an interdisciplinary exchange of state-of-the-art knowledge among researchers in the fields of coastal engineering, geology, oceanography, and related disciplines, with a theme of bringing together theory and practice. Focusing on the physical aspects of sediment processes in various coastal environments, this three-volume conference proceedings provides findings from the latest research and newest

engineering applications. Session topics cover a wide range including barrier-island morphodynamics and evolution, beach nourishment and shore protection, coastal dunes, cohesive sediment transport, field and laboratory measurements of sediment transport processes and numerical modeling, gravel transport, large-scale and long-term coastal changes, LiDAR and remote sensing, longshore and cross-shore sediment transport, marsh and wetlands, regional sediment management, river deltas, sea-level changes, shelf and sand bodies, shoreline changes, tidal inlets and navigation channels. A special session on recent research findings at the Northern Gulf of Mexico is also included.
